Senior Python Developer / Data Engineer | Django / Flask / FastAPI | ORM / SQL | DevOps | GCP / Big Data

PROFESSIONAL SUMMARY

Senior Python Developer and Data Engineer with 9+ years of experience building production-grade Python web frameworks, REST APIs, microservices, enterprise applications and data platforms using **Django, Flask, FastAPI, ORM/SQL, PostgreSQL, MySQL, MongoDB, BigQuery, GCP, Azure and AWS**. Strong experience in productionizing backend and data frameworks with **Docker, CI/CD, Jenkins, TeamCity, GitHub Actions, Linux, PyTest, monitoring, release validation and deployment support**. Hands-on exposure to **big data and analytics workflows**, including ETL/ELT pipelines, API/file/database ingestion, SQL transformations, Pandas/NumPy processing, data-quality checks, reconciliation, batch jobs and cloud-based data delivery.

CORE SKILLS

- **Python Backend:** Python 3.x, Django, Flask, FastAPI, REST APIs, Microservices, AsyncIO, Pydantic, API design, production support
- **ORM / SQL:** SQLAlchemy, Django ORM, PostgreSQL, MySQL, Azure SQL, BigQuery SQL, schema design, query optimization, transactions
- **Data / Big Data:** ETL/ELT, API ingestion, file/database ingestion, batch processing, Pandas, NumPy, CSV/Excel/JSON/XML, validation, reconciliation, data quality, BigQuery, Databricks exposure
- **Cloud / DevOps:** GCP, AWS, Azure, Docker, Linux, Git, Jenkins, TeamCity, GitHub Actions, Ansible, CI/CD, environment configuration, deployment automation, monitoring
- **Security / Quality:** OAuth 2.0, OIDC, JWT, RBAC, request validation, secure APIs, PyTest, Postman, structured logging, production incident debugging

PROFESSIONAL EXPERIENCE

Senior Software Engineer | EPAM | Clients: Royal Bank of Canada, Thomson Reuters

Greater Noida, UP | Oct 2025 - Apr 2026

- Delivered Python backend and data-engineering components using **Django/Flask/FastAPI patterns** for enterprise document, workflow and Microsoft Word add-in platforms.
- Built **ORM/SQL**-driven CRUD APIs, data-access layers, transactions, pagination, filtering and optimized queries using SQLAlchemy/Django ORM-style models.
- Designed ETL-style pipelines to extract document metadata, clauses and references, normalize them into structured schemas, validate quality and expose outputs through secure APIs.
- Productionized services using **Docker, Git, CI/CD, PyTest, deployment validation, environment configuration, structured logging and release-support practices**.
- Worked with cloud and data-platform concepts including **GCP-style API/data delivery**, object/data storage patterns, SQL datasets and downstream analytics/big-data readiness.

Sr Python Engineer | Publicis Groupe | Client: Performics - OneSearch

Gurugram, Haryana | Jun 2024 - May 2025

- Developed production Python services using **Django, Flask and FastAPI** for marketing analytics, search intelligence, alerting, triage and dashboard workflows.
- Worked extensively on **GCP and BigQuery**-backed ETL pipelines ingesting Google, Bing/Microsoft and Adobe Analytics data through APIs and scheduled jobs.
- Implemented SQL transformations, source-to-target mapping, schema normalization, reconciliation, deduplication and data-quality checks for analytics-ready datasets.
- Used MongoDB, BigQuery SQL, Python/Pandas and API connectors to process structured/semi-structured data for reporting and operational decisioning.
- Productionized releases with **Docker, TeamCity CI/CD, Git, private-cloud deployment, PyTest/Postman validation, monitoring and incident debugging**.

IT Analyst | Infosys | Client: Morgan Stanley

Chandigarh, Punjab | May 2022 - Jun 2024

- Built enterprise and financial-services backend applications using **Flask, Django and FastAPI/Tornado-style Python services** for workflow-driven platforms.
- Designed database models, **ORM/SQL** modules, CRUD services, reporting utilities, validation layers and notification workflows across SQL and NoSQL systems.
- Developed ETL-style scripts for internal API/database ingestion, data cleansing, transformations, loading, reconciliation and operational reporting.
- Supported productionization through **Jenkins, Ansible, Git, Linux, environment automation, deployment scripts, release checks and support runbooks**.
- Worked with cloud-ready architecture patterns, including containerized services, secure APIs, API gateways/enterprise access patterns and GCP/AWS/Azure-aligned deployment concepts.

Technology Analyst | TCS | Client: Bank of America

Hyderabad, India | May 2021 - May 2022

- Developed Python backend modules using **Flask/Django** for catalog, pricing, workflow and enterprise data-management use cases.
- Created REST endpoints, dynamic forms, service layers, **ORM/SQL-style data access**, validation logic and backend utilities for business users.
- Built ETL scripts to normalize catalog/pricing datasets and move structured/semi-structured data into downstream systems.
- Worked with MongoDB, Cassandra and SQL concepts for persistence, data validation, large-data handling and production support.
- Supported DevOps and production release activities using **Jenkins, Ansible, Git, Linux deployments, automated tests and operational troubleshooting**.

Software Engineer | ScoopWhoop Media

Delhi, India | Jul 2018 - Feb 2021

- Built internal CMS, campaign and social-media management platforms using **Python, Flask-oriented web frameworks, REST APIs and MongoDB**.
- Created SQL/NoSQL-backed data models, CRUD APIs, reporting utilities, data cleanup jobs and scheduled integration scripts for content operations.
- Implemented data-processing pipelines for large-scale content cleanup, campaign reporting, API ingestion and operational analytics.
- Deployed and productionized services on **AWS EC2/Lambda** with Git-based releases, environment configuration, monitoring-oriented troubleshooting and Linux operations.
- Worked on scalable SaaS-style backend patterns applicable to big-data/content-volume workflows, cloud deployment and secure API delivery.

Jr Software Engineer | Vakil Desk

Delhi, India | Jul 2016 - Jul 2018

- Developed employee CMS, order-management modules and backend utilities using **Python web-framework patterns, Flask-style services and REST APIs**.
- Built database-backed modules with SQL/NoSQL concepts, CRUD operations, validations, reporting and lightweight ORM-style data access.
- Created schedulers, ETL/reporting utilities and AWS Lambda automations for order tracking, status updates and internal operations.
- Supported production maintenance, EC2 deployments, bug fixes, release validation, Linux troubleshooting and operational enhancements.
- Gained early exposure to cloud-hosted backend systems, batch data processing and production support practices for business applications.

SELECTED PROJECTS

- **GCP / BigQuery Marketing Analytics Platform:** Built ETL pipelines for Google/Bing/Adobe analytics ingestion, SQL transformations, data-quality validation and client-ready analytics datasets.
- **Document Automation ETL & Word Add-in:** Built React/Office.js add-in backed by FastAPI services for document metadata extraction, validation, transformation and downstream API workflows.
- **Secure Python API Platform:** Designed Django/Flask/FastAPI services with OAuth 2.0/OIDC/JWT, RBAC, SQL/ORM layers, structured logging, PyTest and production support controls.
- **CI/CD and Release Automation:** Implemented Jenkins, TeamCity and GitHub Actions workflows for build, test, Docker packaging, deployment validation and rollback readiness.

EDUCATION

Bachelor of Computer Applications | GGSIP University | Delhi, India | 2016 | 73% | First Division
